Building a Model of a Chemical Reaction Homework Assignment

Here's your chance to let your creative juices flow! You will make a model of a chemical reaction. You will be required to use common household and/or craft materials to create the molecules in the reaction.

Use any material(s) you want as long as it's safe and within reason! You may not buy materials - just use things you find around the house (styrofoam, light clay, paper mache, paperclips, foil, paper, etc.). Please avoid food items that will cause odor and rot later in time.

You will be required to make the chemical reaction below for your model:

Your model will be due on **Thursday, December 8**. Please bring your model with you to class on this day.

Your model will be a performance grade using the following criteria:

- Total of 8 molecules (3 points each, 24 points total)
- Plus signs and yield sign (1 point each, 5 points total)
- Creativity (3 points)
- Neatness (3 points)

_____ / 35 = _____ %
